ACKNOWLEDGEMENT

- I would like to express my sincere gratitude to all those who have supported and guided me throughout the development of this project titled “**Sports Academies Management System.**” This project has been a great learning experience and has helped me enhance my technical as well as practical knowledge.
- I am highly thankful to our respected faculty members for providing us with the opportunity to work on this project and for their continuous guidance, valuable suggestions, and encouragement during the entire development process. Their support has been instrumental in completing this project successfully.
- I would also like to thank my teammates for their cooperation, coordination, and contribution. Working together has helped us understand teamwork and problem-solving in a better way.
- Finally, I would like to express my gratitude to my family and friends for their constant support and motivation, which encouraged me to complete this project successfully.
- This project has helped me gain knowledge about modern web technologies such as React and Tailwind CSS and has improved my understanding of realworld application development.

Vishwa Nayak & Nandani Kakadiya
230406019023 & 230406019016

ABSTRACT

- *The **Sports Academies Management System** is a web-based application designed to provide a centralized platform for users to explore sports academies located in Ahmedabad and Gandhinagar. The main objective of this system is to simplify the process of searching and accessing detailed information about various sports academies in these cities.*
- *In the current scenario, users often face difficulties in finding accurate and organized information about sports academies. This system aims to overcome this problem by providing all relevant details such as academy name, location, and other necessary information in one place.*
- *The project is developed using modern frontend technologies including React.js and Tailwind CSS to ensure a responsive and user-friendly interface. The system focuses on providing a clean design and smooth user experience for better accessibility.*
- *This project demonstrates how web technologies can be used to solve realworld problems by organizing and presenting data efficiently. It also highlights the importance of digital platforms in improving user convenience and accessibility.*
- *Overall, the system provides a simple, efficient, and user-friendly solution for managing and exploring sports academies.*

CHAPTER : 1

INTRODUCTION

1.1 PROJECT DETAILS

- The Sports Academies Management System is a web-based application developed using React.js and Tailwind CSS. It serves as a centralized directory platform for users to explore and access information about sports academies located in Ahmedabad and Gandhinagar. The system is designed with a clean and responsive user interface to ensure accessibility across all devices.
- The system is further enhanced with backend integration using Node.js and MongoDB to manage dynamic data and API-based communication.

1.2 Purpose

- The purpose of this project is to provide a single, organized platform where users can easily find verified sports academies without spending time searching multiple sources. The system eliminates the difficulty of locating accurate academy information by presenting all necessary details in one place.

1.3 Scope

The system covers sports academies located in Ahmedabad and Gandhinagar only.

Users can browse, search, and filter academy listings.

The platform is web-based and accessible through any modern browser.

The system is built as a frontend application using React.js and Tailwind CSS.

Backend integration and payment features are outside the current scope.

1.4 Technology and Literature Review

Technologies Used:

- **React.js** — A JavaScript library used for building dynamic and reusable UI components.
- **Tailwind CSS** — A utility-first CSS framework for creating responsive and modern designs quickly.
- **JavaScript (ES6+)** — Core programming language for application logic
- **HTML5** — Markup structure of the web application.
- **Node.js** — A runtime environment used for building the backend server and handling API requests.
- **Express.js** — A web framework used to create RESTful APIs.
- **MongoDB** — A NoSQL database used to store and manage academy data dynamically.
- **Mongoose** — An ODM library used to interact with MongoDB efficiently
- **Literature Review:** Existing platforms like Justdial and Sulekha list sports academies but lack sport-specific filters and verified information. Play focuses on venue booking rather than academy discovery. No dedicated platform exists specifically for sports academies in Ahmedabad and Gandhinagar — this project fills that gap.

CHAPTER : 2
PROJECT MANAGEMENT

2.1 Feasibility Study

2.1.1 Technical Feasibility: - The project uses React.js and Tailwind CSS, both of which are widely supported, open-source, and well-documented technologies. The development team has the required knowledge and access to necessary tools such as VS Code and a modern browser. Hence, the project is technically feasible. The backend is developed using Node.js and MongoDB, which are scalable and efficient technologies. API testing was performed using tools like Postman, ensuring proper data communication between frontend and backend.

2.1.2 Time Schedule Feasibility: - The project was completed within the academic semester timeline. Development was divided into phases — planning, design, development, testing, and documentation — each allocated sufficient time to ensure timely completion.

2.1.3 Operational Feasibility: - The system is simple and user-friendly, requiring no special training to use. Any user with basic internet access and a browser can access and navigate the platform with ease. Hence, it is operationally feasible.

2.2 Project Planning & Scheduling

2.2.1 Project Development Approach: - The project followed an iterative development approach. Features were developed and tested in small cycles, allowing continuous improvement based on feedback at each stage.

2.2.2 Project Plan

Phase	Activity	Duration
Phase 1	Requirement Gathering & Planning	Week 1–2
Phase 2	UI/UX Design & Wireframing	Week 3–4
Phase 3	Frontend Development	Week 5–8
Phase 4	Testing & Bug Fixing	Week 9–10
Phase 5	Documentation & Submission	Week 11–12

2.3 Risk Management

2.3.1 Risk Identification

- Incomplete or inaccurate data about sports academies.
- Time constraints due to academic workload.
- Browser compatibility issues.
- Lack of real-time data without a backend.

2.3.2 Risk Analysis

Risk	Likelihood	Impact
Inaccurate academy data	Medium	High
Time constraint	High	Medium
Browser compatibility	Low	Medium
No backend/real-time data	High	Medium

2.3.3 Risk Planning

- Data was manually verified before being added to the system.
- A clear project timeline was maintained to manage time effectively.
- The UI was tested on multiple browsers (Chrome, Firefox, Edge).
- Static data was used as a substitute for backend integration in this phase.

2.4 Project Estimation

2.4.1 Effort Estimation

Task	Estimated Hours
Requirement Analysis	10 hrs
UI/UX Design	15 hrs
Frontend Development	40 hrs
Backend Development	30 hrs
Task	Estimated Hours
API Development & Testing	15 hrs
Database Design (MongoDB)	10 hrs
Testing	10 hrs
Documentation	10 hrs
Total	140 hrs

CHAPTER : 3
SYSTEM REQUIREMENTS SYSTEM

3.1 Current System Study

3.1.1 Information Sources: - Currently, users rely on general business listing websites like Justdial, Google Maps, or word-of-mouth to find sports academies. These sources do not provide dedicated or organized information specific to sports coaching institutes.

3.1.2 Method of Searching for Info: - Users typically search manually using Google, browse social media pages, or ask friends and family. There is no single platform designed specifically for discovering sports academies in these cities.

3.2 Problems and Weakness of Current System

- Information is scattered across multiple platforms.
- No sport-specific filter or category system exists
- Academy details may be outdated or unverified.
- Users waste time visiting multiple sites to gather basic information.
- No centralized comparison of academies is possible.

3.3 User Characteristics

General Users — Students, parents, or athletes looking for sports coaching options.

Age Group — Primarily 10 to 35 years.

Technical Skills — Basic internet browsing skills required.

Goal — Find relevant academy details quickly and easily

3.4 Functional Requirements

The system shall display a list of all sports academies.

The system shall allow users to search academies by name or sport.

The system shall display detailed information of each academy.

The system shall provide filter options based on location or sport type.

The system shall have a responsive design for mobile and desktop use.

The system shall fetch academy data dynamically from the backend database.

The system shall allow adding, updating, and deleting academy data through APIs (admin functionality - future scope).

The system shall connect frontend and backend using REST APIs.

3.5 Hardware and Software Requirements

Category	Requirement
Processor	Intel Core i3 or above
RAM	Minimum 4 GB
Storage	10 GB free disk space
Category	Requirement
Operating System	Windows 10 / macOS / Linux
Browser	Chrome, Firefox, Edge (latest versions)
Code Editor	VS Code
Framework	React.js , Node.js , MongoDB , Express.js, Mongoose
Styling	Tailwind CSS
Version Control	Git / GitHub

3.6 User Constraints

3.6.1 Regulatory Policies — No personal user data is collected, so there are no privacy regulation concerns in the current version.

3.6.2 Hardware Limitation — Users need a device with an active internet connection and a modern browser to access the system.

3.6.3 Interfaces to Other Applications — The current version does not integrate with any third party applications or APIs.

3.6.4 Higher Order Language Requirement — The system is developed in JavaScript using React.js, which is a high-level programming language accessible to most modern browsers.

3.6.5 Reliability Requirement — The system should load pages within 3 seconds and display accurate academy data without errors.

3.6.6 Safety & Security Consideration — Since no login or personal data is involved in the current version, security requirements are minimal. Future versions may include authentication.

CHAPTER : 4

SYSTEM ANALYSIS

4.1 System Architecture Design

- The Sports Academies Management System follows a component-based architecture using React.js. The application is divided into reusable components such as Navbar, Academy Card, Search Bar, Filter Panel, and Academy Detail
- View. Data is stored in static JSON format and rendered dynamically through React components.
- The Sports Academies Management System follows a full-stack architecture consisting of frontend and backend components.
- **Frontend:**
The frontend is developed using React.js and Tailwind CSS, providing a responsive and interactive user interface.
- **Backend:**
The backend is developed using Node.js and Express.js, which handles API requests and server-side logic.
- **Database:**
MongoDB is used as a NoSQL database to store academy-related data such as name, sport type, location, and contact details.
- **Communication:**
The frontend communicates with the backend using RESTful APIs. Data is fetched dynamically from the database and displayed to the user.

4.1.1 Use-Case Diagram

4.1.2 E-R Diagram

4.1.3 System Activity Diagram

4.1.4 Context Diagram

4.1.5 Data Flow Diagram

4.2 Database Design

Field Name	Data Type	Description
academy_id	Integer	Unique identifier for each academy
Name	String	Name of the sports academy
sport_type	String	Type of sport offered
location	String	City/Area of the academy
Contact	String	Contact number
description	String	Brief description of the academy

4.3 Data Dictionary

- **User Module: -**

Field Name	Data Type	Size	Description
user_id	INT	11	Unique ID for each user (Primary Key)
Field Name	Data Type	Size	Description
Name	VARCHAR	100	Name of the user
Email	VARCHAR	100	User email address
password	VARCHAR	255	Encrypted password
Phone	VARCHAR	15	Contact number
Role	VARCHAR	20	User role (User/Admin)

- **Academy Module: -**

Field Name	Data Type	Size	Description
academy_id	INT	11	Unique ID for each academy (Primary Key)
Name	VARCHAR	100	Name of the academy
sport_type	VARCHAR	50	Type of sport (Cricket, Football, etc.)
location	VARCHAR	100	Location of academy
Contact	VARCHAR	15	Contact number
description	TEXT	—	Detailed information about academy
created_at	DATETIME	—	Record creation date

- **Inquiry Module: -**

Field Name	Data Type	Size	Description
inquiry_id	INT	11	Unique ID for each inquiry (Primary Key)
user_id	INT	11	Reference to user (Foreign Key)
academy_id	INT	11	Reference to academy (Foreign Key)
message	TEXT	—	Inquiry message from user
Status	VARCHAR	20	Inquiry status (Pending/Resolved)
Field Name	Data Type	Size	Description
created_at	DATETIME	—	Date of inquiry

- **Admin Module: -**

Field Name	Data Type	Size	Description
admin_id	INT	11	Unique ID for admin (Primary Key)
Name	VARCHAR	100	Admin name
Email	VARCHAR	100	Admin email
password	VARCHAR	255	Encrypted password
Role	VARCHAR	20	Role (Super Admin / Manager)
last_login	DATETIME	—	Last login timestamp

CHAPTER : 5
CONCLUSION

- The Sports Academies Management System successfully achieves its objective of providing a centralized and user-friendly directory of sports academies in Ahmedabad and Gandhinagar. The system was developed using React.js and Tailwind CSS, ensuring a modern, responsive, and accessible user interface.
- Through this project, we gained practical experience in frontend web development, component-based architecture, and real-world problem solving. The system demonstrates how technology can be used to organize and present information in a way that benefits end users.
- In future versions, the system can be extended to include backend integration, user authentication, online enrollment, and payment features to make it a complete sports academy management platform.
